

## Add on

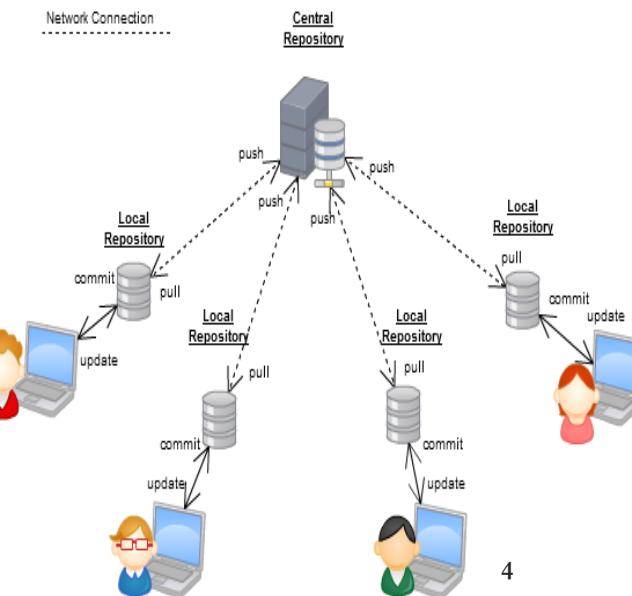

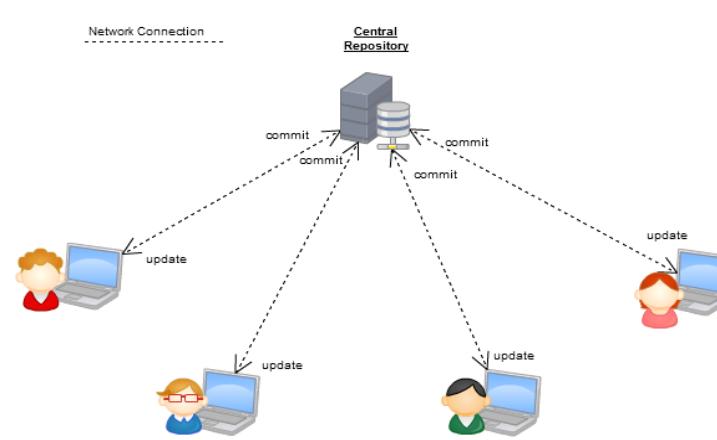

- Came out of Linux development community
- Linus Torvalds, 2005
- Initial goals:
  - Speed
  - Support for non-linear development (thousands of parallel branches)
  - Fully distributed
  - Able to handle large projects like Linux efficiently
  - Global Information Tracker (acronym name)

# Version Control Systems

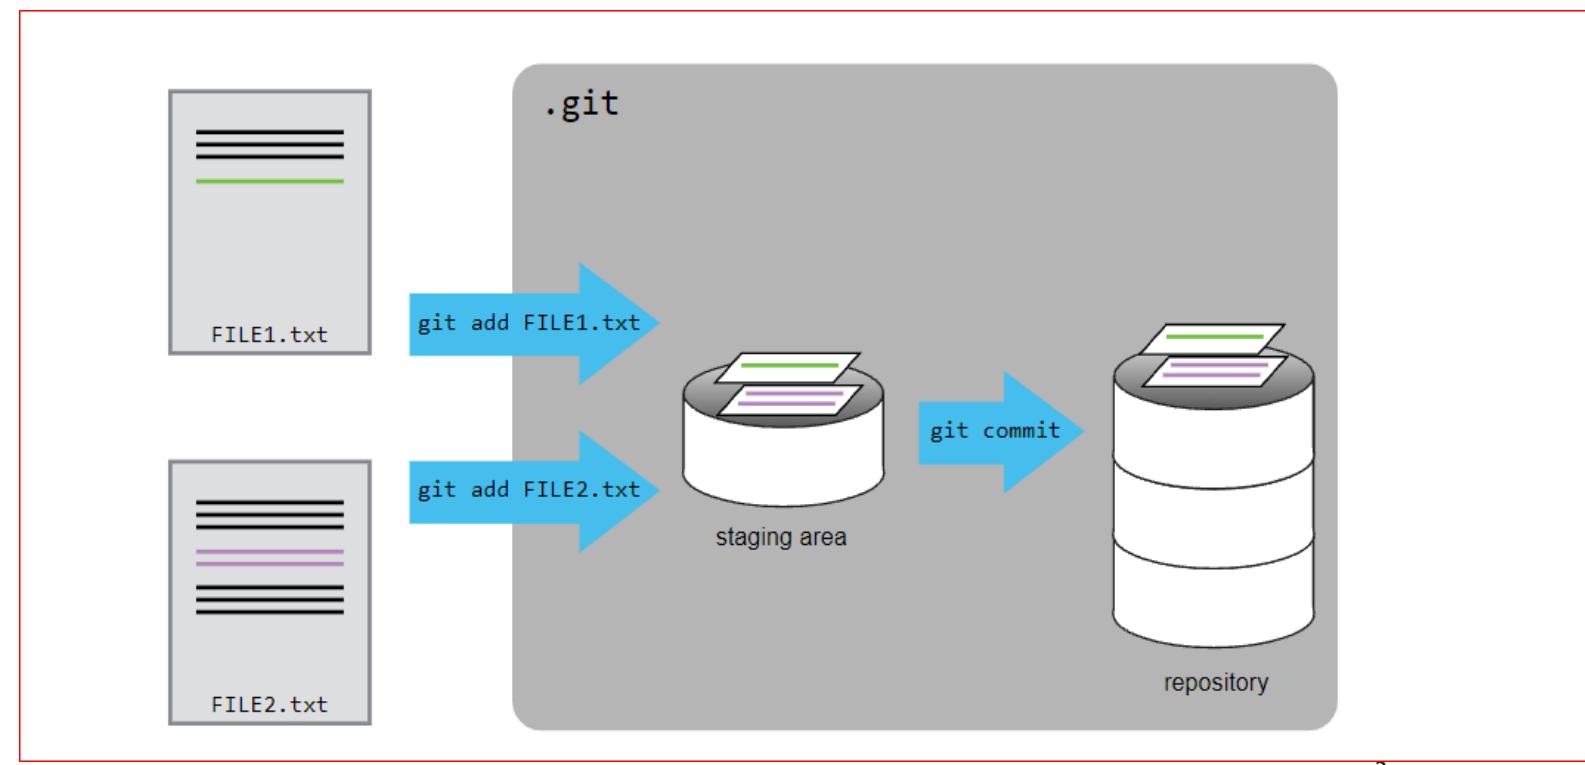

- Some well-known version control systems are **CVS**, **Subversion** and **Git**

## Adding Multiple files...

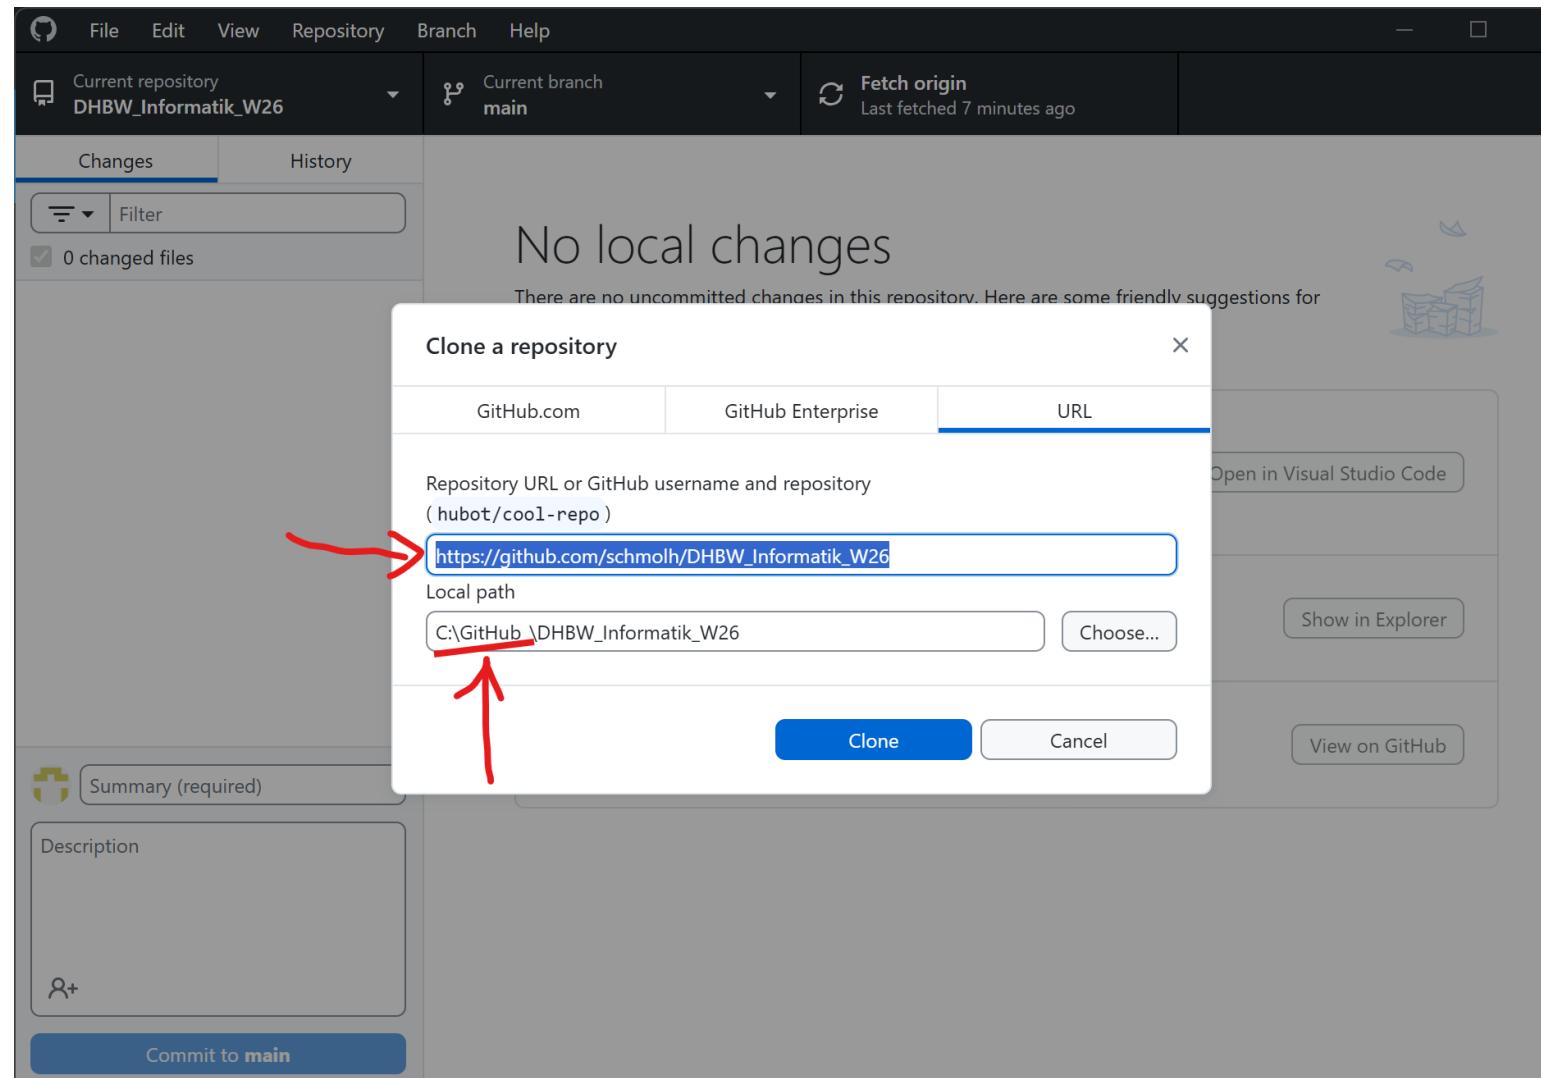

# Git Command

command	description
<code>git clone <i>url</i> [<i>dir</i>]</code>	copy a git repository so you can add to it
<code>git add <i>files</i></code>	adds file contents to the staging area
<code>git commit</code>	records a snapshot of the staging area
<code>git status</code>	view the status of your files in the working directory and staging area
<code>git diff</code>	shows diff of what is staged and what is modified but unstaged
<code>git help [<i>command</i>]</code>	get help info about a particular command
<code>git pull</code>	fetch from a remote repo and try to merge into the current branch
<code>git push</code>	push your new branches and data to a remote repository
others: <code>init</code> , <code>reset</code> , <code>branch</code> , <code>checkout</code> , <code>merge</code> , <code>log</code> , <code>tag</code>	

# GIT Clone repository

# **GIT: Clone Repository**

# FS CODE Setup

## Anwendungsbeispiel: World Wide Web (WWW)

### Hypertext Markup Language (HTML)

Alle Webseiten werden über die Hypertext-Auszeichnungssprache (*Markup Language*) **HTML** dargestellt. HTML hat die aktuelle Version 5.2. (Stand: 14.12.2017) und kommt meistens in Zusammenhang mit **CSS** (*Cascading Style Sheets*) vor, welche die visuelle Darstellung der Webseiten über Gestaltungsvorlagen vornimmt.
